

Modifications to the Image Regulation, in Costa Diamante Residential

*C. Héctor Valenzuela*

**Costa Diamante Residential Administration**

Under the situation that has been made in the IMAGE control of the construction of the residential houses, where clearly the regulation has not been followed, when building with different architectural styles in several houses, I infer on the followings:

In order to give a sequence and order to the actual situation, I contribute with an opinion where I indicate a change on the regulations according to the number or paragraph and title that it's on the regulations in "Image Regulations" of Costa Diamante Residential, referring to the 3rd paragraph with title "Architectural Image Criteria", which I state the following:

In the type or Architecture, modify the use of MISSION Architectural style, to using four types:

**Contemporary**

**Modern-Contemporary**

**Mediterranean**

**Santa Fe.**

The finishes will be according to the Architecture Style and won't be necessarily of the rustic type.

The colors on the houses will remain as indicated in the same regulation.

As for me in the in the conditions of use and designated areas for gardens first and second floor will remain the same,

Obey conditions for the use of the second floor and avoid blocking Seaview, according to the reference plane that has been used.
